## Bellows suction cup S.B75-2NP50.NS38F. 50

> The lifting movement can be used to separate small and thin objects.

- Only lightweight objects should be handled when the lifting force is parallel to the surface of the object, in order to achieve good precision and safe lifting movement.
- Suitable for level adjustment. Several short bellows in one lifting device can handle objects with height differences and varying shapes, for example embossed or corrugated plates.
- With mesh filter.
